Driver Safety
Measurement and Monitoring

Transworld's award winning road safety solution, the **Mobile Eye** and its on line driver behaviour measurement and monitoring portal, **FleetView**, together offer a 360^0 view of any organisation's work-force and their adherance to company safety regulations.

Mobile Eye

The Mobile Eye is a patented smart, stand-alone computing device that can function independantly of the network, capturing violations and data even in the absence of the GSM networks. It is a field-proof device, with no user settable buttons, indicators or connectors.

Backed by Transworld's industry bench-mark SLA of 72 hours across the country, at 23 field locations and other access at any place in the country at other locations, the FleetView and Mobile Eye system are a winning combination for any enterprise.

The device is not repairable in the field and is 'hot-swapped' when and if it malfunctions. Transworld field service personnel carry stand-by devices with them when attending to field service requests.

Driver Engagement

FleetView's driver engagment module allows the capturing and monitoring of information related and specific to the driver, with analytical reports allowing 'anytime review' of safety performance, including:

- Driver Training data
- Next training due / overdue
- Vehicle inspections / safety records due
- Driver counselling and response
- Goals or KRAs assigned
- Discussions on avoidable incidents
- Driver fatigue and risk behaviour history

2.FleetView

FleetView is an enterprise class web platform, that allows tracking of driving characteristics and driver behaviour, permitting measurement against peers within and outside the organisation. FleetView has set industry level benchmarks in the measurement and monitoring of:

- Erratic and spiky driving – Harsh acceleration and Harsh Braking (RA and RD)
- Adherance to planned routes and driving patterns – Journey planning and JRM (Journey Risk Management)
- Continous Driving – Driving without aminimum duration rest break (CD)
- Night driving – Banned driving hours (ND)
- Work hours – Working hours, including driving hours on the road (DH)
- Incident reconstruction – Last 2 minutes of any incident, reconstructed second-by-second
- Driver risk rating by driver, department, zone region
- Automatic alerts when vehicle data is not reported
- Escalation for L1, L2, L3 alerts, with SMS and emails going right upto the HSE Head
- All data captured & computted at 1 second resolution.
- On board incident data record for last 240 minutes (4 Hours)
- Capture upto 3 levels of Harsh Acceleration and 3 levels of Deacceleration
- Remote incident data download
- SOS/Panic button feature as option
- KRA reporting
- Company user heirarchy modules
- Over Speeding Report (OS)
- Driven more than specified KM
- Halt View Report
- Exception override facility
- Jitter management
- Monthly Safety Performance Report
- Tag facility(Example: To manager,etc.)

Upgrade:

- Upgradable to Risk Zone Identification.
- Upgradable to Dual Camera exception capture
- Per second resolution for all events
- Accident recording for at least the two minutes before any accident
- Over Speed on per second basis Example OS for 23 seconds (most apps/devices just give speed at a particular time)
- Option to upgrade same device to OBD2, Cameras (Road and Cabin facing), Driver ID
- In Cab Notification of upcoming hazard (not dependant on GSM coverage)
- Multi level event settings for Harsh Braking, Acceleration, Speed Zoning
- Complete comprehensive on site service and support – no fine print

3.Mobile Application

FleetView Mobile Application :

- FleetView Application is designed to view and enter data of your vehicle on mobile phones.
- It is easier and quicker to enter important data like Non-usage intimation and Odometer reading.
- You can also view the alerts and violations of your vehicle at any point of time.
- This Application is user specific.

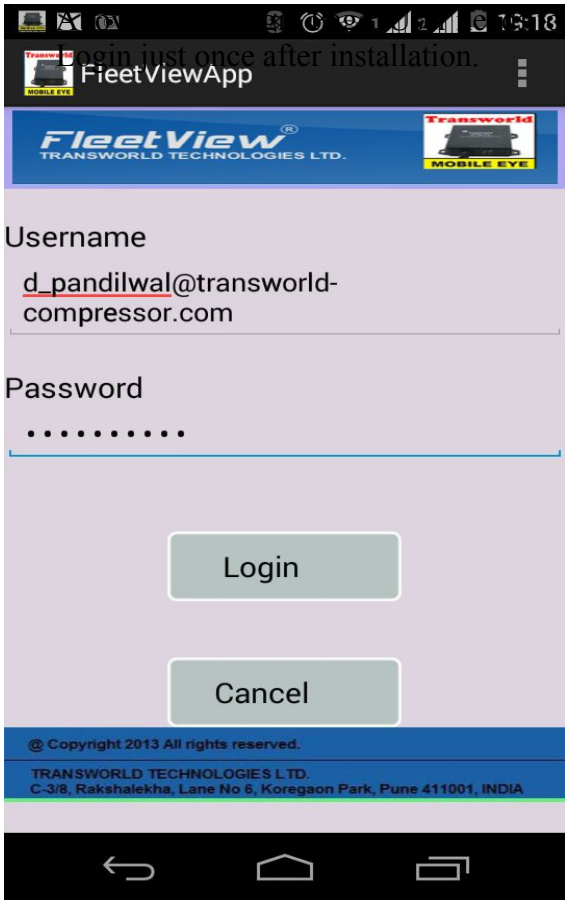
Features :

- Non-usage intimation
- Odometer Reading
- Alerts
- Violations

Home Page:

Above figure is the Home page of the Application from where you can select the required icon for further information.

Login Screen:



Login just once after installation.

6.SOP(Standard Operating Procedure)

SOP of Non-Operational Vehicles:

Standard Operating Procedure to be followed in case of non-operational vehicles is given below.

1. The device which is connected in your vehicle is on Ignition, That mean whenever you start the vehicle the data will update.
2. If the user found the devices is not showing data, then please verify that the power connection to the devices is correct.
3. Make the ignition on and check devices led is working . (red led in the device is stable, green led in the devices and blue led in the atenna both blinks.)
4. After the verification please log the complaint in Transworld Portal (myfleetview.com) and you will get the complaint Id.
5. Within 4 hrs you will get respond from our end.
6. Within 72hrs your issue will be solved.
7. Escalation Level

Designation	Contact Nos	Mail Id
AVL Support	020-41214444	avlsupport@Mobile-Eye.In
Executive	9762007125	csd1@myfleetview.com
CSD Manager	9766652984	mgrcsd@myfleetview.com
Operations Manager		mgrops@myfleetview.com

SOP Of Incident:

Standard Operating Procedure to be followed in case of incident is given below. Failure to follow the SOP will allow the system to overwrite its memory and the incident data will be lost.

1. **DO NOT SHIFT, MOVE or TOW** the vehicle.
2. **Inform Transworld** about the incident **immediately**. Transworld team will try to download the incident data remotely. If successful, Transworld will send a confirmation email.
3. If the Transworld team needs the device to be sent to TW office, then remove the device from vehicle and dispatch to Transworld following instructions below.
4. **DO NOT SHIFT, MOVE or TOW** the vehicle before removing the **DEVICE. Disconnect the device from power supply and remove the device from vehicle.**
5. If **Immediate Removal** is not possible**, CUT POWER SUPPLY & GPS CABLE. If the power LED is ON even after power disconnection(Battery devices), then wrap the device with an aluminium foil or cover it in a metal box till LED's go off(4 to 8 hrs for battery discharge).**
6. **Vehicle to be moved only on confirmation from Transworld OR after securing the device as above.**
